Samvera
an open source solution for building digital repositories

Mark Bussey, Karen Cariani, and Robin Ruggaber
What we’ll cover

• What is Samvera?
• Community structure and resources
• Hands on examples exploration
• Technical Overview & Resourcing
• Getting started with Samvera
• How to pitch Samvera: Benefits
• Q & A
Hour 1: Introductions, overview of Samvera products and the community – what is it, why is it different, ask audience what they are looking for, show website and wiki, and discuss the how the community at large works.

Hour 2: The second hour will give a general technical overview designed for non-coders. Showcase some applications that exist. The staff skills needed to maintain and contribute a Samvera solution will be discussed, resources that exist to get started, and how to contribute code to the community. [Give a 10 minute break halfway through]

Hour 3: Personas (UL/Dean, Executive Tech Lead, Middle Managers, Software Engineers); Benefits of being part of a community, how is this and advantage; positive and negative risk assessment; how does it differ from other solutions; call to action; finish with an invitation to Virtual and physical connect; how to pitch Samvera and get institutional support. It will discuss the advantages of being part of the community and how that strengthens the sustainability of the tools, the applications, and the community overall.

Mark says: check out the “What is Samvera” presentation on the right side of this page
https://wiki.duraspace.org/display/samvera/Events%2C+presentations+and+articles
Let’s Start with You

• Introductions
• What are your goals for the morning?
• Where are you in the process?
• What are your concerns about Samvera?
Samvera Overview

what is it?
what does it do?
why is it different?
What is Samvera?

- A robust repository fronted by feature-rich, tailored applications and workflows ("heads")
  - *One body, many heads*

- Collaboratively built “solution bundles” that can be adapted and modified to suit local needs.

- A community of developers and adopters extending and enhancing the core
  - *If you want to go fast, go alone. If you want to go far, go together.*
Why Samvera?

• Need a flexible, rich, robust repository solution
• Be part of a community
  – Shared resources, shared risk, shared advances
• “We” is smarter than “me”
  – Especially in this crowd
• Control your own destiny
• Build institutional capacity
• Practice best practices
• The way work is getting done now
Fundamental Assumption #1

No single system can provide the full range of repository-based solutions for a given institution’s needs,

...yet sustainable solutions require a common repository infrastructure.
Point Solution Approach - Welcome to Siloville

Digital Repository

Scalable, Robust, Shared Management and Preservation Services
CRUD in Repositories

Create/Submit/Edit (CUD)

Search/View (R)

Repository/ Persistent Storage
CRUD in Repositories

Create/Submit/Edit (CUD)  -->  Repository/Persistent Storage  -->  Search/View (R)
Major Samvera Components

- hydra-head
- Blacklight (Read Only)
- Fedora
- Solr
- Solrizer
Used by:

• Large Universities
• Small Universities
• Colleges
• Public Broadcasting
• Government Ministry
• National Libraries
• National Lab
• Small Research Labs
• National Digital Repository
• Statewide Digital Libraries
• Rock & Roll Hall of Fame
• Chemical Heritage Foundation
• Museum of Performing Arts
• A Shakespeare Festival

Used for:

• Self-deposit system
• Digital Collections System
  • Sheet Music
  • Architectural resources
• Electronic Theses & Dissertations
• Digital Image System
• Media Management
• Media Preservation System
• Research Data Management
• Digitization Workflow System
• Digital Preservation System
• Digital Archives System
• Library Monograph Acquisitions System
• And more!
Next Up:

How we work

How do I get involved?
Fundamental Assumption #2

No single institution can resource the development of a full range of solutions on its own,

...yet each needs the flexibility to tailor solutions to local demands and workflows.
Samvera Philosophy: A Community

• An open architecture, with many contributors to a common core
• Collaboratively built “solution bundles” that can be adapted and modified to suit local needs
• A community of developers and adopters extending and enhancing the core
• “If you want to go fast, go alone. If you want to go far, go together.”
The Samvera Way

• Not a directed project
• Investment in a framework, not an application
  – Contributions back to core code base
• Investment in a community, not a vendor
  – Contributions back to community: Training, documentation, modeling, evangelism, support
• Travel / face-time
Community

• Conceived & executed as a distributed, collaborative, open source effort

• Initially a joint development project between Stanford, Univ of Virginia, and Univ of Hull

• Samvera Partners are the backbone of the project
  • Coalition of the willing
  • No fees or dues
  • Apache-style consensus and governance

• Steering Group provides administration, continuity, and serves as backstop
  • But no central planning, no Project Director, no “one” architect
Community Structure

- **Steering Group** (elected by partners)
  Stewards of the project - individual membership

- **Partners** (Institutional)
  Formally committed institutional membership

- **Working & Interest Groups**
  Topically aligned groups that span organizations & roles

- **Committers**
  Developer community

- **Community adopters**
Samvera Partners

...are individuals, institutions, corporations or other groups that have committed to contributing to the Samvera community; they not only use the Samvera technical framework, but also add to it in at least one of many ways: code, analysis, design, support, funding, or other resources.

Samvera Partners collectively advance the project and the community for the benefit of all participants.
Training & Connecting

• **Good**: read the documentation and learn-by-doing

• **Better**: connect through social channels
  – Email lists, IRC, weekly phone calls
  – Github interactions

• **Best**: meet in person. Face time fuels collaboration!
  – Samvera Connect: annual, worldwide, community meeting
  – Samvera (Partner) meetings: 3-6 ad hoc, topic-based meetings per year (usually)
  – Regional Groups: convening ad hoc
Get Involved: Many Hands Make Light Work

• Getting involved with Samvera can be at different levels:
  • Adopter
  • Developer
  • Partner
• Need to ask:
  • What involvement is required to enable you to meet your needs?
• But also,
  • If we contribute back, what more do we gain?
Stay Connected

- Website ([http://samvera.org](http://samvera.org))
- Wiki page ([https://wiki.duraspace.org/display/samvera/](https://wiki.duraspace.org/display/samvera/))
  - Partner meeting agendas & notes
  - Events & Details
- Monthly Partner calls
- Partner listserv
- Samvera Partner meetings & Samvera Connect
- Identify a Samvera Partner doing similar work and get in touch
- Identify need for vendor input and make contact to discuss options
- Come to events (like this one!)
Code Licensing

• All Samvera code is available under Apache License, Version 2.0
• All code commitments are being managed through Contributor License Agreements
  • Individual – each developer is clear about what they are contributing
  • Corporate – each institution is clear about what it is contributing

• Code contributors maintain ownership of their IP
  • ...and grant a non-exclusive license to the project and its users
Interest & Working Groups

- Collection Extensions Working Groups
- Component Maintenance Working Group (Phase 1)
- DSpace/Samvera Interest Group
- Hyrax Analytics Working Group
- Repository Management Interest Group
- Samvera Applied Linked Data Interest Group (formerly Working Group)
- Samvera Archivists Interest Group (formerly Working Group)
- Samvera Code Stability Working Group
- Samvera CONTENTdm Migration Interest Group
- Samvera Contribution Model Working Group
- Samvera Data Mapper Working Group
- Samvera Documentation Working Group (enrolling)
- Samvera EZID to DataCite DOI Working Group
- Samvera Geo Predicates Working Group
- Samvera Geospatial Interest Group
- Samvera Governance Working Group
- Samvera Hyrax Batch Import Working Group
- Samvera Marketing Working Group
- Samvera Metadata Interest Group (formerly Working Group)
- Samvera Newspapers Interest Group
- Samvera Permissioning Analysis and Design Working Group
- Samvera Interest Group for Advising the Hyrax Roadmap (SIGAHR)
- Samvera URI Selection Working Group
- Samvera User Experience Interest Group
Community Resources

website
wiki
slack channels
e-mail lists
meetings- in person and virtual
the people themselves!
Communication Channels

- **Slack** - for real-time interaction
- **E-mail** - for asynch and longer discussions
- **Community Calls** - Samvera Tech & Community calls, Virtual Connect
- **In Person** - Connect, regional meetings, other conferences, & workshops
Community Resources

● **Website** - for the managers
  https://samvera.org

● **Wiki** - for the doers
  https://samvera.org/wiki

● **Github** - for the makers
  https://github.com/samvera
  https://github.com/samvera-labs
  https://github.com/samvera-deprecated
Exercises

• Search for a topic of interest to you from the samvera-tech or samvera-community Google Groups

• Find a Samvera Interest or Working Group of interest to you; find the most recent meeting notes

• Using the Samvera Wiki…
  https://wiki.duraspace.org/display/samvera/Samvera
  • Sign up for the samvera-tech or samvera-community Google Groups
  • Get a Samvera wiki account
  • Join the project-samvera Slack team
First Up:

Example Sites

What are folks doing with it?
Tufts Digital Library

- Fedora content pre-dates Hydra & Samvera
- Multi-app ecosystem (management, discovery, image library, others)
- Supports multiple content types

Live Site: https://dl.tufts.edu
Built using the Avalon Media System

Rich tool for management and discovery of audio and visual resources

Provides gated discovery and streaming authentication

Live Site: https://media.dlib.indiana.edu
Alexandria Digital Research Library

• Fedora 4 + RDF based
• Broadly focused Institutional Repository hosting multiple content types
• Includes a mix of born digital and digitized content

Live Site: https://www.alexandria.ucsb.edu
Earthworks

• Heterogeneous GIS Content
• Search and browse augmented by spatial search functions
• Includes content harvested from multiple sources

Live Site: https://earthworks.stanford.edu

Hands-On

Any questions so far?
Create an account

2. Click the Login link
3. Click on “Sign Up” (just under the Login button)
4. Enter your e-mail, choose a password, and click on “Sign Up”
Deposit a new work

1. Click on the logo in the upper left corner
2. Click on the “Share Your Work” button
3. Select a type of work
4. Add required metadata, attach a file, choose visibility, accept the deposit agreement
5. Save your work
Edit your work

1. Choose “Dashboard” from the menu in the upper right corner
2. Click on Works
3. Use the “Actions” dropdown to choose edit
4. Enter some data in “Additional Fields”
5. Add a file or two, update versions
Browse content

1. Click on the logo in the upper left
2. Click on the search icon to browse the repository
3. Use search and facet to narrow results
4. View some items
5. Log-out - how does your experience differ?
Deposit a new work

1. Reminder: Logo, Share, Select
2. Add required metadata, attach a file, choose visibility, accept the deposit agreement
3. Confirm “one step approval” is selected under Relationships
4. Save your work
View your work?

1. Reminder: dashboard, works
2. What do you see?
3. What does your administrator see?
4. Approve some works (Admins)
   a. All Works
   b. Review Submissions
   c. Notifications
Other features to try

1. Gated discovery: Public, DCE, Private
2. Featured works (Admins)
3. Collections
4. Admin dashboard (Group Walkthrough)
5. Background Processing (Group)
Next Up:
The Samvera Pitch
Repository Elevator Pitch

• A (new) way to manage digital content
• The best of Hydra in an easy-to-install, easy-to-configure, feature-rich solution
• Reducing barriers to effective asset management
• & preservation
• For collections and content types of many kinds
• Supports next-generation web technologies
• Is supported by a vibrant and ever-growing open source community.
If You Want To Go Fast …go alone.
…use
Samvera
A Worldwide Presence
By the Numbers....

Going Far Together

First Worldwide Hydra Connect @ UCSD, January 2014
2\textsuperscript{nd} Worldwide Hydra Connect @ Cleveland, OH, September 2014
160 participants from 56 institutions
3\textsuperscript{rd} Worldwide Hydra Connect @ Minneapolis, OH, September 2015
200 participants from 60 institutions
Sustainability

No animals were harmed in the making of this film.
Sustainability...

- For institutions
  *Partners help shoulder the load*

- For other projects
  *Post-project maintenance & governance*

- For leveraging funders’ investments

*No animals were harmed in the making of this film.*

Last resort… mark@curationexperts.com

Thank you
Slides below from last years OR related to tech and may be of use as others were.
Agenda

• What is Samvera?
• Community Framework
• Technical Framework
• Data Modeling
• Getting Started with Samvera
• Discussion
Major Components

Samvera Applications (e.g., Hyrax)

Plugins
derivatives, editor, browse-everything, file-characterization [...]

hydra-head

active_fedora  blacklight

ldp  rsolr

Middleware

HTTP API  HTTP API

Fedora 4  Solr
A Note on Fedora

• Flexible, Extensible, *Durable* Object Repository Architecture
  – Flexible: model and store any content types
  – Extensible: easy to augment with apps and services
  – Durable: foundation of preservation repository

• Proven, sustained and successful digital repository
  – 100’s of adopters; 13 years of development, 4 releases
  – Vibrant community & funding under DuraSpace

• Fedora 4.0 released in Dec ‘14; co-evolving with Hydra
A Note on Ruby on Rails

• **Rapid** application development for web applications: “Convention over configuration”
  – 10x productivity

• **Supportable:** MVC (Model-View-Controller) and Rails framework make code well-structured, predictable

• **Testable:** Rspec and Cucumber give powerful, automatable, testing tools

• **Learnable:** Stanford went from 1 to 8 Ruby savvy developers in one year (no new hires)
Hydra’s Core Gems

Interact with Fedora with a Rails/ActiveRecord pattern
Hydra’s Core Gems

Build digital objects using PCDM-based models
Hydra’s Core Gems

Work with files, like:
- Characterize
- Make derivatives
- Virus check
- Extract text

Group them to create “works” (or complex objects)
Hydra’s Core Gems

Get basic Ruby on Rails views, and more shared features:

- Custom models
- Routing for CRUD
- File auditing
- Versioning
- Single-use links
- Upload file sets
- Access controls
- Leases and embargoes
Hydra’s Core Gems

A fully functional repository application, with:

- Proxy deposit
- User dashboard
- User profile
- Featured works & researchers
- Contact form
- WYSIWYG UI editing
- Activity streams
- Upload via cloud providers
- Integration with Zotero
Hydra’s Core Gems

A fully functional repository application
Build basic Rails views & shared features: custom models
Work with files; group them into digital objects
Build PCDM-based Models for Digital Objects
Interact with Fedora with a Rails/ActiveRecord pattern
• Hyrax (formerly known as Sufia 7.x)
• Lots of features already done
• Complex objects based on PCDM in Fedora 4
• Building on Sufia, one of most actively maintained and widely used Hydra gems
Agenda

• What is Samvera?
• Community Framework
• Technical Framework
• **Data Modeling**
• Getting Started with Samvera
• Discussion
PCDM = Portland Common Data Model

pcdm:Collection

pcdm:hasMember (m:m)
ore:aggregates (m:m)

pcdm:hasMember (m:m)

pcdm:Object

pcdm:hasFile (1:m)

pcdm:hasRelatedFile (1:m)

pcdm:File

A Access
B Bitstream
D Descriptive
T Technical
Why PCDM?

1.) Best practices in data modeling
2.) Code interoperability
3.) Data interoperability
Agenda

- What is Samvera?
- Community Framework
- Technical Framework
- Data Modeling
- *Getting Started with Samvera*
- Discussion
Getting Started

https://wiki.duraspace.org/display/hydra/Developers

On-line Resources and Tutorials

For New and Potential Adopters:

- new adopters and potential adopters may find the pages here useful: http://projecthydra.org/
- See Hydra Heads (Known Implementations) for more information about each of the Hydra Heads.
- A Hydra Head interactive tutorial has been developed - see under the 'For developers' section below.

For Architecture Level:

- See the Duraspace projecthydra wikis for information at the architecture level:
  http://wiki.duraspace.org/display/hydra/

For Developers:

- Code is hosted on Github: https://github.com/projecthydra
- Github's wikis for projecthydra git repositories are targeted to developers: https://github.com/projecthydra/hydra-head/wiki
Technical Engagement

• Software: https://github.com/projecthydra
  – Developers should start here: https://github.com/projecthydra/hydra-head/wiki

• Note: Most sites start from Sufia on Fedora 4 at this point

• samvera-tech@googlegroups.com, Slack and weekly tech phone calls = best channels for tech support

• Ask questions. Seek help. Commit back.
Typical Staffing

• Repository Manager
  – Typically serves as product owner & service manager. Essential to defining service goals, running service and working with users after set up

• Developers: numbers ranges from
  – 0: borrowed or contracted
  – 1: many sites have a single dev
  – 2-4: most Hydra teams don’t get above 4 developers, usually on sprints rather than dedicated full time

• Optional:
Skills & Training

• Technical Skills
  – Agile & social coding: Git, pull requests & code review, continuous integration are standard.
  – Ruby on Rails: eminently learnable. Rails Bridge is a good starting point if developers are new to Rails.
  – DevOps & Sys Admins: growing coterie of Hydra users leveraging each others’ skills for deployment and operations

• Hydra Camps
  – Typically organize a camp 2-3 times a year
  – Many sites host one as a way to bootstrap rapid development
A word of (polite) warning

- Hydra is open source – anyone can use it freely
- Working with Hydra is not, though, free
  - As in ‘puppies are not free’
  - It requires investment
    - Towards achieving a goal
    - Towards sustaining a solution
- Hydra recognises this and is seeking to provide a way to invest in a mutual direction of travel – come with us!
Agenda

• What is Samvera?
